REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: The claims are drawn to a sustained release formulation consisting of a solid material and a water-insoluble coating film. The film consists essentially of chitosan powder having a particle size from 0.5-400 microns, dispersed in a water insoluble polymer such as ethylcellulose and water-insoluble enteric polymers. The weight ratio of the water-insoluble polymer to the chitosan is from 4:1 to 1:4. The Lerner patent discloses a solid dosage form comprising a coating of a water-insoluble polymer and a water-soluble powder dispersed in the citing. The Lerner patent discloses chitosan and exemplifies calcium pectin as the pore forming powders dispersed in water-insoluble polymers similar to the instant claims. The Declaration dated 7/7/08 provides unexpected results, showing that chitosan containing coatings provide superior sustained release profiles than calcium pectin containing coatings. Since the Lerner patent lists chitosan and calcium pectin as functional equivalents it would have been expected for the compounds to produce similar release profiles. However the Declaration shows that even at comparable ratios (1:1) calcium pectin provides an inferior sustained release profile. For these reasons the claims are novel and unobvious over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
